

SISTEC

ABOUT US

Mission

To lead the technology and manufacturing industry by delivering innovative, reliable, and high-quality electronic, mechanical, HVAC, and automation solutions.

We are committed to providing tailored systems that enhance productivity, ensure operational efficiency, and exceed customer expectations through continuous innovation, technical excellence, and world-class service.

Vision

To become a global reference in integrated engineering solutions — from electronic design and automation to environmental control systems — recognized for our advanced technology, customer-centric approach, and commitment to quality, sustainability, and long-term innovation.

CAPABILITIES

Mechanical Design

- Custom fixture design and manufacturing
- Precision mechanical components
- 3D modeling and prototyping
 - Mechanical systems for testing and automation
 - Integration of mechanics with electronics and vision systems

HVAC Systems

- Industrial and commercial HVAC installation
- Environmental control for labs and production
- Smart monitoring with IoT and analytics
- Thermal stability systems for automated stations
- Preventive and corrective maintenance

Environmental Chambers

- Design and automation of environmental chambers
- Temperature, humidity, and thermal shock control
- HALT/HASS and stress-test systems
 - Data acquisition and test-cycle automation
- Stability, cold, freezing, and custom chambers

Electronic Design

- Custom electronic circuit design
- PCB layout and prototyping
 - Sensor and actuator integration
- Power management and signal conditioning
- Development of specialized controllers

CAPABILITIES

Automation & Test Systems

- Automated test equipment (ATE) development
- Process automation and optimization
 - PLC and industrial controller programming
- End-of-line testing solutions
 - Traceability and data-logging systems

Software Development

- Python, C#, LabVIEW, and embedded software
- Custom applications and dashboards
- Data acquisition, analysis, and reporting
- Computer vision and AI-based algorithms
- Web systems and cloud dashboards

Firmware & Embedded Systems

- Microcontroller programming (ARM, PIC, ESP, etc.)
- IoT systems and wireless communications
- Real-time monitoring and control systems
- Protocol integration (UART, SPI, I2C, CAN, Modbus)

HIGHLIGHTED PROJECTS

Automated Test & Programming Station

Automated station designed for electronic board programming, functional testing, and hipot validation, fully integrated with conveyor handling and controlled by a centralized test database.

Intelligent Systems Monitoring Dashboard

Real-time monitoring platform for automated systems, providing performance analytics, yield tracking, and live event notifications fully integrated with email, WhatsApp, Telegram, and other communication networks.

Automated Vision Inspection Station

Automated inspection cabinet equipped with advanced vision sensors and conveyor integration to validate correctly assembled parts, ensuring precision and quality control in real time. Installed in Monterrey.

Automated Box Lift & Rotation Unit

Automatic system designed to elevate and rotate boxes between conveyor levels, enabling controlled orientation changes and seamless integration with material-handling lines.

HIGHLIGHTED PROJECTS

Custom-Engineered Control Panels

Fully customized electrical and automation control panels, integrating controllers, protection devices, relays, backup systems, and high-quality industrial wiring. Each panel is engineered to meet the specific requirements of the project, ensuring safety, reliability, and optimal field performance.

Professional HVAC & Room Cooling Systems

high-performance air-conditioning and dedicated room-cooling solutions engineered for commercial and industrial environments, ensuring precise climate control, energy efficiency, and reliable operation tailored to each application.

Custom-Engineered Industrial Systems

Design robust, custom-built electronic and IoT systems tailored to meet specific industrial requirements, ensuring precise functionality, high reliability, and seamless integration into any production environment.
